Category	Explanation																																								
Population	The population count within the specified catchment																																								
Gender	Counts of Males and Females within the specified catchment																																								
Affluence	<p>Affluence is based on the disposable income level of the group relative to its age level. CACI calculates disposable income as gross income minus essential outgoings. Essential outgoings are: Tax & national insurance contributions, Food & clothing costs, Mortgage & rents, Council tax, utilities, water & structural insurance, Childcare, student loans and pensions contributions, and Travel to work costs.</p> <p>Low: Count of population by Polaris Plus segments which are classified as Low Polaris Plus Segments: 1.1, 2.1, 3.1, 4.1</p> <p>Medium: Count of population by Polaris Plus segments which are classified as Medium Polaris Plus Segments: 1.2, 2.2, 3.2, 4.2</p> <p>High: Count of population by Polaris Plus segments which are classified as High Polaris Plus Segments: 1.3, 2.3, 3.3, 4.3</p>																																								
Age Profile	Counts of residents by Age band																																								
Economic Status (16+)	<p>Current year estimates, CACI Up to date demographics. Number of adults aged 16+</p> <p>Full-time: In full-time employment</p> <p>Part-time: In part-time employment</p> <p>Self employed: In full-time or part-time employment, with or without employees</p> <p>Unemployed: Unemployed, not currently working but are actively seeking</p> <p>Retired: a person who has retired from a working or professional career</p> <p>Other: Includes long term sick, disabled, looking after home/family</p>																																								
Index vs GB Average	The index is a comparison between the target catchment area % and the GB base % for a set of variables. An index of 100 means the catchment area is in line with GB. Less than 100: there is a lower catchment area % than the GB. Greater than 100 means that you have a higher % of customers in your catchment area for that particular variable than you would expect compared to GB																																								
Over GB Average	Index value is > 120																																								
Around GB Average	Index value is between 80 - 120																																								
Under GB Average	Index value is < 80																																								
Polaris Segmentation																																									
Polaris is Heineken's unique customer segmentation, which is based on Lifestage, Energy Levels and Demand.

Licensed Premises																																									
The data on the map and in the table originates from CGA. They collect licensed premise data, anywhere with a liquor license, for example; hotels, sports, clubs, restaurants, pubs, etc.																																									
Competition Pubs																																									
Competition Pubs are the following HUK Segments: Craft Led, Good Pub Good Food, A Bit of Style, High Street Pub, Circuit Bar, Premium Local, Community Pub, Clubland, Family Pub Dining.																																									
Mobile data																																									
Mobile App data identifies where consumers are at specific times of day, week and year, using GPS data and gives a better understanding of which consumers are likely to be using which pubs and when. The data is measuring anyone from within a 60m radius from the pub.																																									
Acorn																																									
Acorn is a geodemographic segmentation of the UK's population. It segments households, postcodes and neighbourhoods into 7 categories, 22 groups and 65 types. By analysing significant social factors and population behaviour, it provides precise information and an in-depth understanding of the different types of people.																																									
Transactional data																																									
Consumer Spend data provides actual credit and debit card expenditure for hospitality venues allowing you to see spend and average transaction value at an pub level. The data shows who from a Polaris segmentation is spending in the pub.																																									
Sparsity																																									
Sparsity is a measure of how built-up the area is on a scale of 1-20, with 1 being the most built-up and 20 the least.																																									
<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr> <td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td>11</td><td>12</td><td>13</td><td>14</td><td>15</td><td>16</td><td>17</td><td>18</td><td>19</td><td>20</td> </tr> <tr> <td colspan="3">Metropolitan</td> <td colspan="6">Large Urban</td> <td colspan="4">Small Urban</td> <td colspan="7">Rural</td> </tr> </table>		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	Metropolitan			Large Urban						Small Urban				Rural
